

What's new in ElecTech Version 11

These release notes are for ElecTech 11 build 546 and covers the updates from ElecTech 2006.

Build 544

1. New Distribution Pre Electrification tool

The latest DT_PET 2005.1.2 (2006-09-14) which uses 2005 income survey data is included in the ElecTech installation and is used internally by ElecTech. Please refer to the installed manual "20060315 Manual for Distribution PET 2005 v7.pdf"

2. Updated Costs

All material and labour costs have been updated in the ElecTech.mdb Access database. A 3 year compounded increase based upon a 10% per annum increase was used.

$1.1^3 = 1.331$, resulting in an overall increase of 33.1%.

3. Village GUI

The "Year" drop down box in the Village user interface caused a small problem in that was possible to select a year that is not supported by ElecTech - this has been fixed.

Build 546 - 04 June 2010

Improved methodology for Server License checking and Application usage logging

This works with ILibS.dll Version 2010.1.0.154
