

## Bulk License Client Configuration

1. From a PC connected to the network - one of the workstations with the relevant application installed, run the application, Click on Help / Registration and select "Server Bulk License".

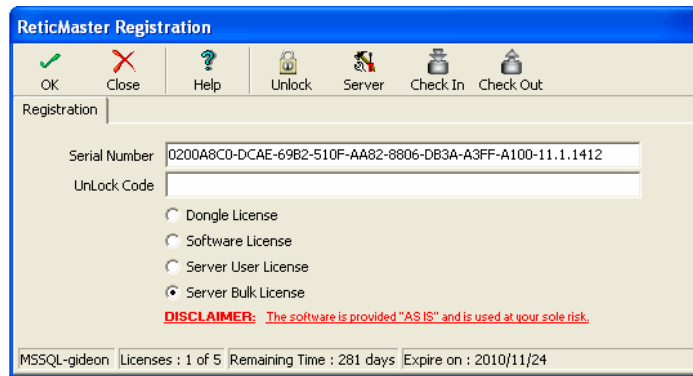

2. The application will attempt to connect to a server and fail. Click 'OK' until the Server License screen comes up.

3. Make sure the dot is next to the correct server type – if you have installed IIPower, then select Microsoft SQL Server.
4. Enter your Server name in the Server Name field, leave IIPower in the Instance field and change the Database field to IIPower11 and click OK.
5. The application will now connect to the correct server and generate a new serial number for the installation. Send the serial number to [info@interfaces.co.za](mailto:info@interfaces.co.za).

6. When you receive the unlock code, on the registration window, click Unlock

7. Paste the unlock code into the Unlock Code field and click OK

8. Repeat steps 1 through 4 for each workstation that is to use the software.
