

Installing PO 11 for MSSQL

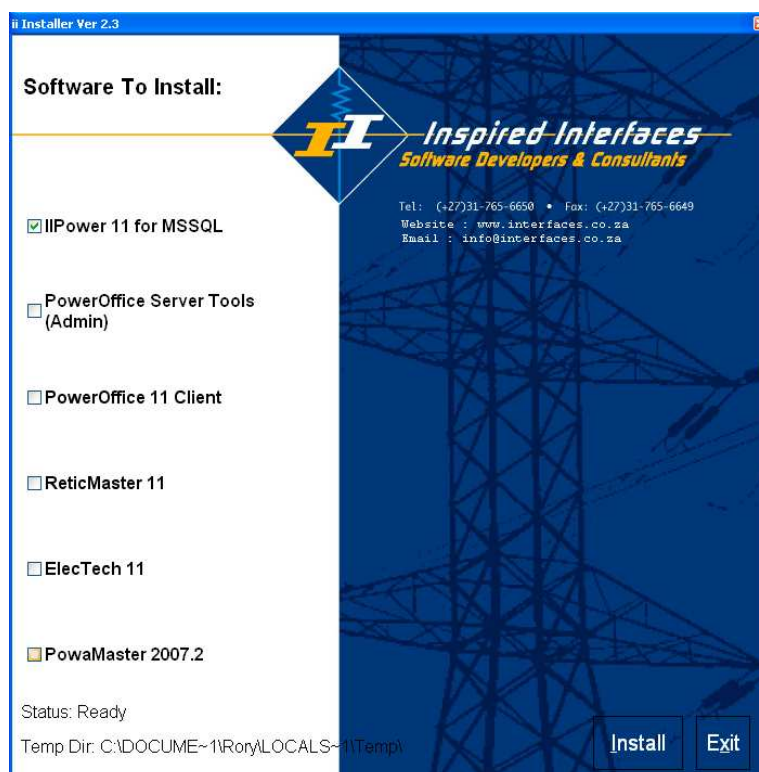

Select an appropriate computer that will act as the Server.

PO 11 for MSSQL must be run on the machine acting as the server.

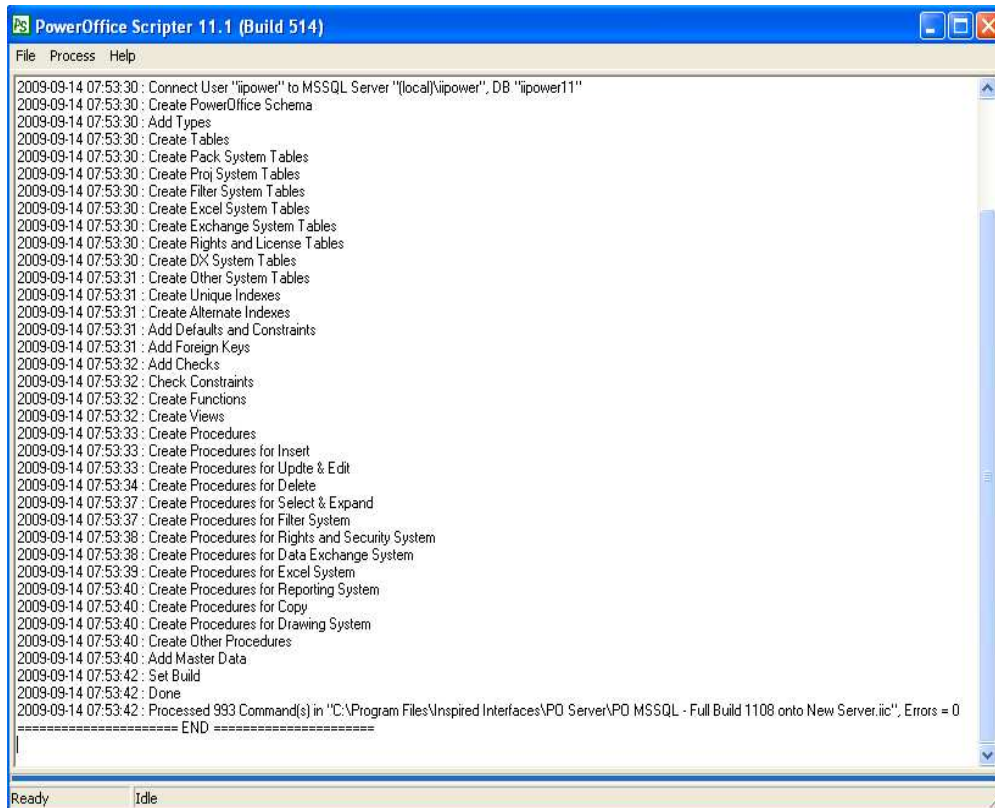

This computer must have a fixed IP address.

Windows XP	Must have Administration Rights
Windows Vista	Must have Administration Rights and User Account Control switched off.

- Installation can be done from the Inspired Interfaces CD or downloaded from www.reticmaster.com website.
- Download the installation file PowerOffice v11 Database Installation.
- Once downloaded run the msi file.
- If using an Inspired Interfaces CD. Insert the CD, when the Installer window opens select the PO 11 for MSSQL check box and **Install**

- Accept the suggested defaults during installation.
- The PowerOffice 11 Scripter will run automatically, make sure you have 0 errors at the end of installation.

The screenshot shows a window titled "PowerOffice Scripter 11.1 (Build 514)" with a menu bar containing "File", "Process", and "Help". The main area displays a log of database operations performed on 2009-09-14 at 07:53:30. The operations include connecting to a user, creating a schema, adding types, and creating various system tables (Pack, Proj, Filter, Excel, Exchange, Rights and License, DX, Other, Unique, Alternate, Defaults and Constraints, Foreign Keys, Checks, Functions, Views, Procedures, and Reporting System). The log concludes with "Processed 993 Command(s) in 'C:\Program Files\Inspired Interfaces\PO Server\PO MSSQL - Full Build 1108 onto New Server.iic', Errors = 0" and "END". The status bar at the bottom shows "Ready" and "Idle".

```
2009-09-14 07:53:30 : Connect User "ipower" to MSSQL Server "(local)\ipower", DB "ipower11"
2009-09-14 07:53:30 : Create PowerOffice Schema
2009-09-14 07:53:30 : Add Types
2009-09-14 07:53:30 : Create Tables
2009-09-14 07:53:30 : Create Pack System Tables
2009-09-14 07:53:30 : Create Proj System Tables
